Cloud & Infrastructure Experience

I have hands-on experience working with the leading cloud platforms—**AWS**, **Azure**, and **GCP**—to manage, deploy, and optimize cloud infrastructure. My experience spans across **compute**, **storage**, **container orchestration**, **monitoring**, **messaging systems**, and **CI/CD pipeline management**.

AWS (Amazon Web Services):

- **EC2 & Networking:** Deployed and managed EC2 instances, configured **VPC**, **subnets**, **security groups**, and **NAT gateways** to establish secure and scalable cloud environments.
- **Storage Solutions:** Configured and maintained **S3 buckets** for data storage and backups. Managed **IAM roles** for secure access control to S3 and other AWS services.
- **Monitoring & Security:** Set up **CloudTrail** for tracking API calls and user activity. Used **CloudWatch** to create custom dashboards and set up alerts to monitor EC2 performance, disk space, and network traffic.
- **Serverless & Automation:** Automated tasks using **AWS Lambda** for event-driven architecture. Utilized **Session Manager** for secure shell access to EC2 instances without the need for direct SSH.
- **Messaging & Orchestration:** Configured **SNS** and **SQS** for decoupled messaging and event-driven workflows. Managed **MSK (Managed Kafka Service)** to handle large-scale streaming data and integrated it with other services.
- **Container Orchestration:** Managed Kubernetes clusters with **EKS** for containerized workloads. Performed regular upgrades to EKS versions and integrated with CI/CD pipelines.

- **Azure:**

- **VMs & Networking:** Provisioned **Azure Virtual Machines (VMs)** for both Linux and Windows-based workloads. Configured **network security groups (NSGs)** and **VPNs** for secure communication between VMs.
- **Container Orchestration:** Managed **Azure Kubernetes Service (AKS)** for containerized applications. Upgraded AKS clusters, managed namespaces, deployments, and configured ingress controllers.
- **Storage Solutions:** Provisioned **Azure Disk Storage** and **Azure File Storage** to handle stateful applications. Set up storage accounts and managed access control policies.
- **Content Delivery:** Deployed **Azure CDN** to accelerate the delivery of static content for web applications, optimizing performance across regions.

- **Google Cloud Platform (GCP):**

- **Compute Engine (GCE):** Provisioned and managed **Google Compute Engine (GCE)** instances, including setting up firewalls, load balancers, and configuring access permissions with **IAM**.
- **Container Orchestration:** Managed **Google Kubernetes Engine (GKE)** clusters for running containerized applications at scale. Configured auto-scaling and implemented rolling updates for seamless deployments.
- **Storage Solutions:** Utilized **Google Cloud Storage (GCS)** for object storage and data transfer. Managed buckets, lifecycle policies, and access control.
- **Monitoring & Logging:** Implemented **Cloud Monitoring** and **Cloud Logging** to track and resolve performance issues. Set up **Cloud Trace** for application performance insights.

- **Additional Hands-on Experience:**
- **CI/CD & Version Control:**
  - Managed code repositories using **Git**, **GitHub**, and **GitLab** for version control and collaboration across teams.
  - Built and maintained **CI/CD pipelines** using GitLab CI and integrated them with **Terraform** for automated infrastructure provisioning and management.
- **Infrastructure as Code (IaC) with Terraform:**
  - Developed and maintained **Terraform scripts** to automate the provisioning of cloud resources across AWS, Azure, and GCP. Ensured consistent and repeatable deployments of VPCs, storage, compute instances, and Kubernetes clusters.
- **Kafka & Confluent Cloud Management:**
  - Managed **Confluent Cloud** for Kafka as a service, including stream processing and data replication. Set up and maintained the **AWS MSK (Managed Kafka Service)** for data streaming in AWS environments.
  - Integrated **Datadog** for monitoring Kafka performance, set up dashboards for real-time visibility, and configured alerts to notify teams about any disruptions in service.
- **Monitoring & Troubleshooting:**
  - Worked closely with **Datadog** to monitor applications running on **EKS** and **Confluent Cloud**. Created **custom monitoring dashboards** for tracking system health, error rates, and latency.
  - Configured and managed **alerting systems** in Datadog to meet **SLO (Service Level Objectives)** and ensure issues are detected and addressed proactively.

PathNex
Shaping Careers, Building Futures

- **Kubernetes & Version Upgrades:**
  - Performed **Kubernetes version upgrades** for both **EKS** (AWS) and **AKS** (Azure) clusters, ensuring smooth transitions and zero-downtime deployments.
  - Automated **Kubernetes deployment** workflows using **Helm** charts and custom Kubernetes configurations, allowing for more efficient management of microservices.
- **Key Responsibilities & Achievements:**
- **Cloud Infrastructure Management:** Administered, optimized, and scaled cloud infrastructure in **AWS**, **Azure**, and **GCP** to ensure high availability, security, and performance of mission-critical applications.
- **Proactive Issue Resolution:** Utilized monitoring tools like **Datadog**, **CloudWatch**, and **Cloud Monitoring** to preemptively detect and resolve performance bottlenecks, ensuring compliance with **SLOs** and minimizing downtime.
- **Automation & Scalability:** Automated cloud resource provisioning and Kubernetes deployments using **Terraform** and **CI/CD** pipelines, which improved operational efficiency and reduced human errors.
- This experience has equipped me with a strong hands-on understanding of cloud technologies and DevOps practices, making me proficient at building and maintaining highly available, scalable, and secure cloud-based applications.
